

Comparing Two Different Models.

The comparison of two different models of the Central Regulatory Circuit of *Drosophila*.

Abstract

We established and observed two different models of Central Regulatory Circuit of *Drosophila* from different articles and compared them. The models describe the Central Regulatory Circuit which acts in the early stage of the *Drosophila melanogaster* mechanoreceptors morphogenesis. The main component of the Central Regulatory Circuit is the complex of *Achaete-Scute* genes.
